Areas of technical expertise for potential technical assistance transfer

Fortification

Calcium enhancement - Arla Foods Ingredients has milk mineral concentrates which can raise the calcium content of beverages, yoghurts, cheeses and other foods.

Protein enhancement - Arla Foods Ingredients has expertise in protein enrichment of beverages, yoghurts, dairy desserts, biscuits and other food products.

Product Reformulation

Salt reduction - Arla Foods Ingredients can tailor proteins to replace the major part of the emulsifying salts in processed cheese formulation.

Fat reduction - Arla Foods Ingredients can help fulfill requirements for an EU-approved 'reduced fat' or 'low fat' claim, using whey protein.

Food Safety

Knowledge and training in food safety - Arla Foods Ingredients offers knowledge transfer and capability trainings addressing process and quality challenges to improve food safety. Arla Food Ingredients has expertise in the design, development and tailoring of food products having specific nutrition profile and functional requirements leading to an improved stability and longer shelf life of products.

Affordability

Sustainable business models - Arla Foods Ingredients helps to build sustainable business models to provide better nutrition for low-income families in emerging economies.

Product development - Arla Foods Ingredients is engaged in new product development of affordable and nutritious food e.g. dairy products and food enriched with dairy.

Financial Inclusion

Engagement in public private partnerships - Arla Foods Ingredients has experience in public private partnerships notably to conduct research project on nutrition and dairy health. For example, Arla Foods Ingredients is a partner of the GAIN Nordic Partnership, they support a project in Ethiopia to build a dairy supply chain.
